

Ariane Lesnyak

Language Data • Taxonomy • Metadata • AI Annotation • Localization QA

Language Data and Taxonomy Specialist with experience organizing enterprise knowledge through metadata classification, controlled vocabularies, localization QA and AI language workflows. Background spanning enterprise content operations, taxonomy governance, multilingual localization, AI annotation and quality review. Experienced in applying labeling guidelines, validating structured metadata, improving terminology consistency and supporting scalable language datasets for enterprise platforms and AI systems.

CORE COMPETENCIES

Taxonomy & Metadata

- Enterprise Taxonomy
- Metadata Classification
- Metadata Validation
- Controlled Vocabularies
- Knowledge Organization
- Content Classification
- Metadata Quality
- Taxonomy Governance

Language Data & AI

- AI Annotation
- Labeling Operations
- LLM Evaluation
- Localization QA
- Content Standards
- Prompt Evaluation
- Language Quality
- Data Validation

Tools & Technologies

- Salesforce Knowledge
- Google Workspace
- CAT Tools
- GitHub
- HTML / CSS
- Python
- Style Guides
- Terminology Databases

PROFESSIONAL EXPERIENCE

Content Classification & Taxonomy Specialist2020—2025

TeamWorker • Claro Brasil

- Classified enterprise knowledge articles using **Salesforce Knowledge** and controlled vocabularies to ensure accurate metadata assignment, improving discoverability and guaranteeing that content appeared in the correct knowledge collections.
- Applied three structured metadata taxonomies (Subject, Product and Customer Profile) before publication, standardizing classification across **15K+ of customer-support articles** and reducing semantic ambiguity.
- Reviewed every article using **editorial guidelines and metadata validation rules** to ensure consistency between article content and assigned taxonomy before publication.
- Collaborated with **15+ writers and editors** throughout the publishing workflow, using structured classification rules to support scalable enterprise knowledge management.
- Validated metadata across **20+ controlled subject categories**, maintaining consistency in enterprise search, navigation and information retrieval.
- Performed **semantic content analysis** to identify the most appropriate metadata combination, ensuring accurate routing inside CRMs and findability to **30K+ agents**.
- Maintained classification consistency by applying organizational content standards instead of individual interpretation, supporting long-term **taxonomy governance**.

Localization QA & Language Quality Specialist2022—Present

Acclaro

- Performed **multilingual localization QA** using terminology databases, linguistic QA workflows and client style guides to ensure production-ready localized subtitles for a **major streaming platform**.
- Reviewed translated user interfaces and documentation, **validating terminology, locale conventions, formatting consistency and language quality** before release.
- Applied localization guidelines to identify linguistic defects, terminology inconsistencies and cultural adaptation issues, improving the final quality of a **leading software family suite**.

Language Data & Localization Consultant2015—Present

Freelance • AI • Localization • Language Data Projects

- Performed **AI data annotation**, localization QA and multilingual language evaluation using project-specific labeling guidelines to improve training datasets for AI and localization workflows.
- Evaluated AI-generated responses using structured quality criteria to **validate reasoning, terminology, fluency, cultural appropriateness and semantic consistency**.
- Created style guides, linguistic documentation and quality checklists** used to standardize language review processes across multilingual projects, improving reviewer consistency.
- Developed **10+ error categories** (grammar, hallucinations, speaker ID) to streamline the quality control process for audiovisual content, improving communication with non-Portuguese speaking teams.
- Reviewed translated content using QA frameworks to identify terminology drift, formatting issues, locale inconsistencies and meaning preservation problems, **with an accuracy rate of 85%**.
- Produced HTML documentation, lightweight Python utilities and interactive case studies to document **taxonomy workflows, localization QA methodologies and annotation processes**.
- Collaborated with **international localization teams across technology, media and AI projects**, adapting workflows to client-specific quality standards and documentation requirements.

EDUCATION

BA in Languages & Linguistics (English & Portuguese)

University of São Paulo (USP)

Strong academic foundation in linguistics, translation, language structure, discourse analysis and cross-cultural communication, complemented by years of enterprise localization, taxonomy and AI language data experience.

Associate Degree in Information Technology

Marechal Rondon School (FMR)

Computer science fundamentals, programming, data structures and software development, complementing my background in linguistics with technical knowledge applied to structured data, automation and information systems.

TECHNICAL SKILLS

Metadata

- Metadata Classification
- Metadata Validation
- Knowledge Organization
- Controlled Vocabulary
- Content Classification
- Taxonomy Governance

Localization

- Localization QA
- Terminology Management
- Style Guides
- Linguistic Review
- Translation QA
- Cross-cultural Adaptation

Technology

- Salesforce Knowledge
- Google Workspace
- CAT Tools
- GitHub
- HTML / CSS
- Python

LANGUAGES

Brazilian Portuguese: Native
English: Professional working proficiency (C1/C2)
French: Working proficiency (B2)
Spanish: Limited proficiency (B1)

ONGOING DEVELOPMENT

Python for Data Science – IBM (*in progress*)
Metadata and Controlled Vocabularies – Library Juice Academy (*in progress*)
Information Architecture Foundations – LinkedIn Learning (*in progress*)
Knowledge Graphs & Semantic Web Technologies
Natural Language Processing Specialization – DeepLearning.AI (*in progress*)
